

EXTENSION KIT

**EXTEND
YOUR
REACH**

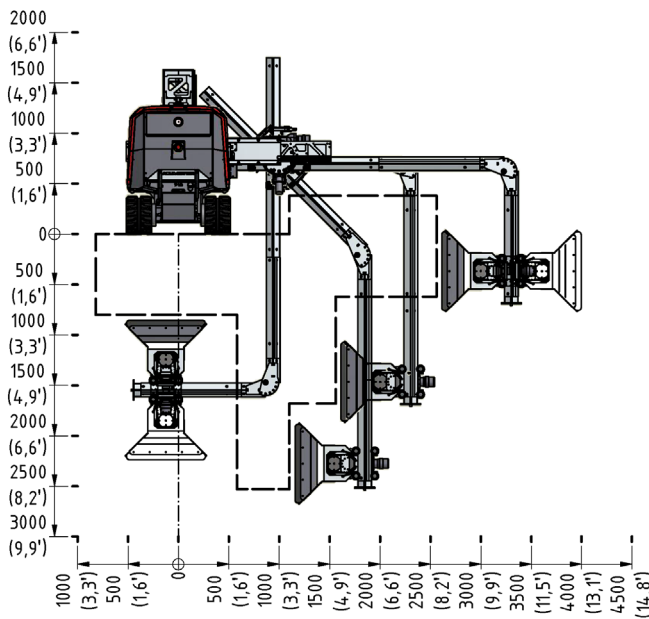

aquajet.se

GET STARTED RIGHT AWAY

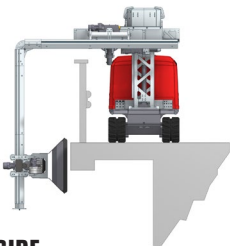

This is a great way to extend your reach in vertical and under/up operations. By mounting the extension kit, the AQUA CUTTER robot can work from the deck to side or under a bridge without dismantling of the bridge railing. That's both smart and useful!

Our standard extension kits come in two versions: Extension kit 2x1 m

and Extension kit 2x1 m with elbow. Regardless of version, there's no need for special tools or any changes in the construction. The kits consist of extension beams, articulated joints, splash covers, and extensions for hydraulics and electronics. Extension kit is compatible with all AQUA CUTTER 710 robots and Aqua Spine.

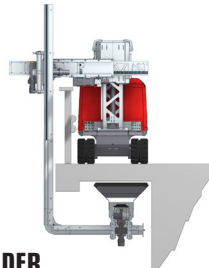

FEATURES AND BENEFITS

// OUTSIDE

Work from the deck and reach over the bridge rail for extended operation on the outside of the surface.

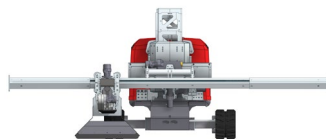

// UNDER

Work from the deck and reach over the bridge rail for extended operation under the surface.

// EXTENDED OUTSIDE

Allows for extended vertical operation as well as outside a Parapet beam.

// EXTENDED

Extended up to 4 meter working width.
